TARGET SITE

TrichoScan-Instructions

Where to measure!

Clipping rules:

Never clip in completely bald areas!

Use always a transition area between bald and normal haired areas.

Never clip in the whorl or the parting

Always clip 2-3 cm beside the parting, that the patient is able to comb over hairs.

Typical clipping sites are shown in the following images.

Those areas are marked with a 

TrichoScan

.....making hair growth measurable
